Profile

Systems Engineer specializing in end-to-end development of scalable digital products and AI integration. Focused on UX optimization, architecture design, and production deployment.

I am characterized by my self-taught capacity, analytical thinking, and result orientation. I excel in agile startup teams, where I contribute technical autonomy, clear communication with stakeholders and focus on generating real impact on the product.

Education

■ **2024 - Universidad de Nariño**

Systems Engineer

03/2019 – 04/2024

■ **2025 - Universidad de Nariño**

Software Development Diploma

08/2024 – 01/2025

■ **2025 - Evolve Your English**

Intermediate English

Soft Skills

- Requirements analysis and management
- Clear communication with clients and stakeholders
- Attention to detail and delivery quality
- Result-oriented collaborative work

Languages

- Spanish (Native)
- English (Intermediate B1)

VIEW CERTIFICATES

Experience

➔ **May 2025 – Present (Freelance - Parallel)**

Soleia (Real Estate) — **Frontend Developer / Web Developer (Freelance)**

- Comprehensive development of real estate platform with interactive SVG map quoter and dynamic geometric logic.
- Real-time state management for lot availability and automated lead capture using Netlify Forms.
- Performance optimization (Lazy Loading, WebP) and responsive design. AI integration for customer service (ongoing).

Technologies: JavaScript Vanilla, HTML5, CSS3, Netlify, SVG, Git, OpenAI API (in development).

➔ **November 2025 - December 2025**

Grayola (AI Startup) — **Full Stack Developer**

- Development of AI-powered marketplace, optimizing UX flows and creative processes.
- Implementation of authentication systems and user onboarding.
- Data architecture and security documentation. Support in deployment and product design.

Technologies: Next.js, Supabase, Git/GitHub, Vercel, AWS (basic services), Stripe, Figma, Slack, Notion, DNS/Namecheap, Auth (OTP/Google)

➔ **September 2024 - June 2025**

Black & Orange — **Backend Developer**

- Backend development and server performance optimization. Design and integration of scalable APIs.
- Integration with external services and technical requirement management with clients.

Technologies: Node.js, React Native, AWS, Oracle Cloud, Postman, HubSpot APIs.

➔ **March 2024 - December 2024**

SIIAN ERP — **Full Stack Developer**

- Development and maintenance of enterprise ERP. Creation of custom modules and RESTful APIs (Finance, Logistics).
- CI/CD automation using Azure DevOps.

Technologies: ASP.NET Core, C#, Entity Framework, Dapper, PostgreSQL.

➔ **July 2023 - January 2024**

TecnoPlanet — **Full Stack Developer**

- Web application and backend service development for process optimization.
- Construction and maintenance of APIs using Django REST, NestJS, and Laravel.

Technologies: Django/Python, Laravel/PHP, NestJS, Angular.

Featured Projects

- **Project Management System:** Implementation of Role-Based Access Control (RBAC) and route security via JWT tokens for efficient resource administration. *(Stack: Node.js, React, JWT)*
- **Academic Management Platform:** Digitization of enrollment and document validation processes for postgraduate programs, optimizing university administrative workflows. *(Stack: Laravel, PostgreSQL)*
- **Multimedia Catalog Application:** Development of a content management interface with dynamic search, advanced filters, and scalable architecture. *(Stack: React, Node.js)*
- **Startup E-commerce Platform:** Development of an online store with interactive catalog and shopping cart. Integrated direct checkout functionality via WhatsApp and email notifications to streamline sales. *(Stack: React, Node.js, EmailJS)*

📂 *All projects available on GitHub with complete documentation (README).*
